EDUCATION

Fudan University

B.S. in Mathematical Economics

Sep 2022 – Jun 2026

(expected)

- GPA: 3.85/4.0 (class rank 2/23, school rank top 5%)

Harvard University

Visiting Undergraduate Student

Jan 2025 – May 2025

COURSEWORK

- **Mathematics & Statistics:** Introductory real analysis; Stochastic Processes; Probability Theory and Mathematical Statistics; Differential Equations; Linear Algebra; Advanced Mathematics
- **Economics:** Econometrics; Econometric Analysis of Cross Section and Panel Data; Applied Time Series Analysis; Intermediate Microeconomics; Macroeconomics; Corporate Finance; International Economics; Public Economics; Development Economics; Economic History; Theoretical and Empirical Perspectives of Entrepreneurship (*PhD*); Political Economy: Institution and Development (*PhD*)

RESEARCH EXPERIENCE

Government Procurement Law and Firm Innovation

Apr 2024 – Apr 2025

Independent Research, funded by Fudan's Undergraduate Research Opportunity Program

- This paper examines the impact of the 2003 Chinese Government Procurement Law (GPL) on firms' technological innovation, using a DID design. The GPL is the first nation-wide regulation of government procurement, which mandated open bidding as the principal form, promoting an open and competitive procurement market. The results indicate that the GPL significantly increased firms' patent applications and R&D investment in procurement-intensive industries. The effects are greater for more efficient firms, and in more corrupt cities. This pattern is consistent with the objective of the GPL, which was to promote an open procurement market and reallocate government contracts toward more efficient firms, particularly in places that were previously more corrupt and distorted. By doing so, the GPL has strengthened firms' incentives to invest in R&D, and fostered innovation growth. I further propose a research design to investigate the underlying mechanisms of how obtaining government contracts affects subsequent innovation, using a novel contract dataset.

Diffusion of Low-Carbon Energy Technologies

Apr 2025 - Oct 2025

to Professor Jacob Moscona (MIT)

- Constructed a comprehensive patent dataset with over 130 million records using SQL and Python; conducted rich data analysis and visualization on technology transfer patterns.
- Researched clean industries (solar PV, battery, etc) to identify barriers to technology diffusion, key features behind China's innovation growth and its implications for other developing economies.

Archival data on China's Fuel and Chemical Industry, 1962–1995

Feb 2024 - Feb 2025

to Professor Ting Chen (Hong Kong Baptist University)

- Constructed a novel firm-level dataset from Chinese Fuel and Chemical Industry yearbooks (1962–1995).
- Designed and implemented a data-cleaning pipeline combining locally hosted LLM parsing, rule-based standardisation, and edit-distance matching to harmonise variables across years.
- Linked yearbook firms to the 1985 and 1995 Industrial Census data for additional firm characteristics.

Environmental Regulation and Firm's Low-Carbon Transition
to Professor Xueyue Liu (Fudan University)

Aug 2023 - Aug 2024

- Translated and proofread the final manuscript.
- Used Stata for data cleansing, analyzing and visualizing of U.S. Occupational Information Network (O*NET) database.

HONORS AND AWARDS

- Honors Program Overseas Exchange Scholarship (5k USD) 2025
- Xipu Reading Scholarship 2023-2024
- Third Prize in Fudan University Scholarship for Outstanding Students 2022-2023
- First Prize in Mathematics Competition of National College Students, Shanghai Division 2023
(Ranked 7th among non-mathematics participants)
- Second Prize in "Qie Wen Jin Si Cup", Fudan University Academic Innovation Challenge 2024

EXTRACURRICULAR ACTIVITIES

Class Leader, Economics & Mathematical Economics Class 2022 09/2023 – present

- Supported classmates' career development by sharing timely lectures/opportunities; managed class media platforms and published featured posts.

Student Union Member, School of Economics, Fudan University 03/2023 – 02/2024

- Organized key events (e.g., *Jingtao* Lectures and academic salons), serving as host/scriptwriter, and handling event photography and media promotion.

VOLUNTEER WORK (SELECTED)

Winter Teaching Program, Jinyan Primary School, Sichuan Province 01/2024 – 02/2024

- Taught primary-school Math Olympiad classes in Southwest China, cultivating students' interest in mathematics.

Alumni Outreach, Shengzhou High School, Zhejiang Province 01/2024 – 02/2024

- Organized a group of alumni to introduce Fudan University and share application and college-life experiences with current students.

"Letters from Afar" Pen-Pal Program 04/2024 – 06/2024

- Exchanged letters with high school students in Inner Mongolia, sharing practical study advice, as well as encouraging their curiosity and a wider view of opportunities beyond their local context.

LANGUAGES AND SKILLS

- Languages: Mandarin Chinese (native), English (fluent)
- Computer Skills: Stata, Python, SQL, L^AT_EX
